Q.P. Code : **4755**

(3 Hours) [Total Marks : 80

N.B. : (1) Question No. **1** is compulsory.
  (2) Attempt **any three** questions out of **remaining five** questions.

1 (a) Find the Laplace transform of te^{-t} cosh2t   5

  (b) Find the fixed points of $w = \dfrac{3z-4}{z-1}$. Also express it in the normal form   5

  $\dfrac{1}{w-\alpha} = \dfrac{1}{z-\alpha} + \lambda$ where λ is a constant and α is the fixed point. Is this

  transformation parabolic?

  (c) Evaluate $\displaystyle\int_{0}^{1+i}(x^2-iy)dz$ along the path i) y=x, ii) y=x^3 5

  (d) Prove that $f_1(x)=1$, $f_2(x)=x$, $f_3(x)=\dfrac{3x^2-1}{2}$ are orthogonal over (-1,1)   5

2. (a) Find inverse Laplace transform of $\dfrac{2s}{s^4+4}$ 6

  (b) Find the image of the triangular region whose vertices are i, 1+i, 1-i under   6
     the transformation w = z+4-2i. Draw the sketch.

  (c) Obtain fourier expansion of f(x) = |cosx| in (-π, π).   8

3. (a) Obtain complex form of fourier series for f(x)=cosh 2x + sinh2x in (-2,2).   6

  (b) Using Cornk-Nicholson simplified formula solve $\dfrac{\partial^2 u}{\partial x^2} - \dfrac{\partial u}{\partial t} = 0$ given   6

  $u(0,t) = 0, u(4, t) = 0,\ u(x, 0) = \dfrac{x}{3}\ (16-x^2)$ find uij for i=0,1,2,3,4 and j=0, 1,2

  (c) Solve the equation $y + \displaystyle\int_{0}^{t} ydt = 1-e^{-t}$ 8

[TURN OVER

4. (a) Evaluate $\int_{0}^{2\pi} \dfrac{d\theta}{5+3\sin\theta}$ 6

   (b) Find half - range cosine series for $f(x) = e^x$, $0 < x < 1$ 6

   (c) Obtain two distinct Laurent's series for $f(z) = \dfrac{2z-3}{z^2-4z-3}$ in powers of   8

   (z-4) indicating the regions of convergence.

5. (a) Solve $\dfrac{\partial^2 u}{\partial x^2} - 2\dfrac{\partial u}{\partial t} = 0$ by Bender - Schmidt method, given u(0, t) = 0,   6

   u(4, t) = 0, u(x,0) = x(4-x). Assume h=1 and find the values of u upto t = 5

   (b) Find the Laplace transform of $e^{-4t} \int_{0}^{t} u\sin 3u\, du$ 6

   (c) Evaluate $\int_{C} \dfrac{z+3}{z^2+2z+5}\, dz$ where C is the circle   i) $|z| = 1$,   ii) $|z+1-i|=2$ 8

6. (a) Find inverse Laplace transform of $\dfrac{s}{(s^2-a^2)^2}$ by using convolution theorem.   6

   (b) Find an analytic function f(z) = u+iv where $u+v = e^x$ (cosy + siny)   6

   (c) Solve the equation $\dfrac{\partial u}{\partial t} = k\dfrac{\partial^2 u}{\partial x^2}$ for the conduction of heat along a rod of   8

   length l subject to following conditions

   (i) u is not infinity for $t \to \infty$

   (ii) $\dfrac{\partial u}{\partial x} = 0$ for x=0 and x=l for any time t

   (iii) u=$lx-x^2$ for t=0 between x = 0 and x=l

Q.P. Code : **4782**

(3 Hours) [Total Marks : 80

N.B. : (1) Questions one compulsory
(2) Solve any **three** questions from the remaining.
(3) Figure to the **eight** indicates full marks.

1. (a) Explain Pattren allowances.   5
(b) Explain Rolling defects.   5
(c) Define the following terms used in welding.   5
(i) Welded Joint   (ii)   Overhead welding
(iii) edge preparation   (iv) slag   (v)   Faux.
(d) How is a rod male by extrusion?   5

2. (a) Differentiate the following: 10
(i) Patterns and core boxes.
(ii) Wing core and Hanging type of cores.
(b) Write short notes on: 10
(i) Pattern allowances
(ii) Types of cores

3. (a) Explain planetary and cluster rolling mills with neat sketcnes.   5
(b) Explain rotary swaging with its sketch?   10
(c) Write short note on: Metal Extrusion.   5

4. (a) Compare TLG and MIG welding Processes?   10
(b) Discuss laser beam welomg along with its advantages and disadvantages.   10

5. (a) How are porous bearings Manufactured? List the a advantages and applications 10
of such bearings
(b) Explain advantages and disadvantages powder Metallurgy.   5
(c) Write the explanatory note on: sintering process in Powder Metallurgy?   5

6   (a) List the different NDT methods? Explain ultrasonic process Method of 8
inspection?   5
(b) Explain with neat sketch. "Radiographic Non-Destructive test:"   7
(c) What are the important properties of plastics from engineering point of view?

QP Code : 4779

(3 Hours) [Total Marks : 80

N. B. : (1) Question No.1 is **compulsory**.

(2) Answer any **three** questions from remaining **five** questions.

(3) Assume suitable data wherever required but justify the same.

(4) Answer to the questions showed be grouped and written together.

1. Answer any **four** questions:— 20

(a) Draw stress strain curve for ductile material & explain salient point on it.

(b) What is sagging and hogging moment in bending moments gives its sign conventions.

(c) Derive flexural formula

$$\frac{M}{I} = \frac{F}{Y} = \frac{E}{R} \text{ OR } \frac{M}{I} = \frac{6}{Y} = \frac{E}{R}$$

State assumption made in simple bending.

(d) What are the assumption made in theory of pure torsion & derive equation of Torsion.

(e) What are the assumptions made in the analysis of struts & column by Euler's buckling theory? What are its limitations?

2. (a) A copper rod 36 mm diameter is encased and rigidly attached at the end of a steel tube which is 50 mm external diameter, thickness of metal being 5mm. The composite section is subjected to an axial pull of 100 KN. Find the stress induced in each metal & the extension on the length of 1 5 m.Take Es= 2 x10⁵N/mm² and Ec= 1.1 x 10⁵N/mm². 10

(b) Determine the value of load W, if support reactions are equal. Also draw shear force diagram and bending moment diagram for the beam loaded as shown in fig.1. 10

Fig. 1

[TURN OVER

JP-Con.: 10630-15.

3. (a) A cast iron beam section is of I section with top flange 80mm x 20mm thick, bottom flange 160 mm x 40 mm thick and the web 200mm deep and 20 mm thick. The beam is freely supported on a span of 5 meter. If the tensile stress is not to exceed 20 N/mm², find the safe uniformly distributed load, which the beam can carry, also find the maximum compressive stress. **10**

(b) A solid shaft is required to transmit 330KW at 120 rpm. The shear stress of material must not exceed 80 N/mm², find the diameter of shaft required, if the above shaft is to be replaced by hollow one with diameter ratio 3:5 and maximum shear stress remain unchanged. Calculate the percentage saving in weight that could be obtained. **10**

4. (a) Show that the strain energy equation in a simply supported beam carrying a UDL w/m is given by , **10**

$$U = \frac{W^2 L^5}{240 EI}$$

(b) Determine slope at the supports and deflection under other points. Also find maximum slope and its position for fig. 2 Take EI = constant. **10**

Fig. 2.

5. (a) A cylindrical vessel with hemispherical ends is 1m long on its cylindrical portion and has 0.5 m diameter. Thickness of wall on cylindrical portion is 6 mm .Taking internal pressure as 1MPa, E = 200GPa & μ = 1/m =0.3. **10**
Determine
1. Thickness of wall of hemispherical portion
2. Change in volume of vessel

(b) A hollow column of C.I. whose outside diameter is 200 mm and has a thickness of 20mm, it is a 4.5 m long and is fixed at the both ends. calculate the safe load by Rankin's formula using a factor of safety of 4. Calculate slenderness ratio and the ratio of Euler's and Rankin's critical load. Take σc= 550 N/mm², a=1/1600 and E = 8 x 10⁴ N/mm² **10**

[TURN OVER

6. (a) An area in the form of L section is shown in the fig. 3 (i) find the   10
   moment of inertia I_{xx}, I_{yy} and I_{xy} about its centroidal axes. (ii) Also
   determine the principal moment of inertia.

Fig-3
   (b) A steel bar is placed between two copper bars each having the same   10
   area and length, as the steel bar at 15°. At this stage they are rigidly
   connected together at both the ends. When the temperature is raised
   to 315°, the length of the bars incease to 1.5mm. Determine the
   original length and the final stresses in the bars.
   Take E_s = 2.1 x 10⁵ N/mm², E_c = 1 x 10⁵ N/mm², α_s = 0.000012
   per °c, α_c = 0.0000175 per °c.

QP Code : 4775

(3 Hrs)   [Total Marks : 80]

- Question No 1 is compulsory.
- Answer any three out of remaining five questions.
- Assumptions made should be clearly stated .
- Assume suitable data wherever required, but justify the same.
- Use of Mollier Chart, Steam Table, permitted.

1   Answer any **Four** of the following :   [20]

   a) Prove that energy is a property of the system

   b) Explain how heat pump is more efficient for heating application than electrical heating.

   c) Determine the maximum work obtainable from a Heat Engine exchanging heat with two finite bodies of equal heat capacities at temperatures T_1 and T_2

   $(T_1 > T_2)$

   d) What is cut off ratio. Discuss its effect on the thermal efficiency of Diesel Engine.

   e) Define Joule Thompson Coefficient and explain its significance.

   f) Write a note on Adiabatic Flame Temperature.

2   a) State and explain the equivalence of Kelvin Planck and Clausius statements of Second Law of Thermodynamics.   [6]

   b) A reciprocating air compressor takes in 2 m³/min at 0.11 MPa, 20 ° C, which it delivers at 1.5 MPa, 111 ° C to an aftercooler where the air is cooled at constant pressure to 25 ° C. The power absorbed by the compressor is 4.15 kW. Determine the heat transfer in the compressor and the aftercooler.   [10]

   c) Define COP of Heat Pump and refrigerator and derive the relationship between the two.   [4]

Q 3 a) Two kg of air at 500 kPa, 80⁰ C expands adiabatically in a closed system until its volume is doubled and its temperature becomes equal to that of the surroundings which is at 100 kPa ,5⁰ C . For this process determine (i) the maximum work (ii) the available energy (iii) the irreversibility.   [10]

   b) A heat engine is used to drive a heat pump. The heat transfers from the heat engine and from heat pump are used to heat the water circulating through the radiators of the building. The efficiency of the heat engine is 27 % and the COP of the pump is 4. Evaluate the ratio of heat transfer to the circulating water to the heat transfer to the heat engine.   [10]

4   a) Plot the Rankine cycle on T-S diagram and derive an expression for thermal efficiency of the cycle. List different methods of improving the performance of the cycle .Discuss any one method in brief.   [8]

[TURN OVER

JP-Con. 9822-15.

b) Water at 40 ° C is continuously sprayed into a pipeline carrying 5 tons of steam per hour at 5 bar, 300 ° C .At a section downstream where the pressure is 3 bar, the quality is be 95 %. Find the rate of water spray in kg/hr. [6]

c) Derive an expression for ratio of Heat Capacities (γ) in terms of isothermal compressibility (k) and adiabatic compressibility (k$_S$). [6]

5 a) A cylinder contains 0.084 m^3 of hydrogen at 1.05 bar and 18^0 C. It is compressed adiabatically to 14 bar and then expanded isothermally to the original volume. The characteristic constant for hydrogen is 4200 kJ/kg K and its specific heat at constant pressure is 14.29 kJ/kg K. Determine the final pressure of the gas and the amount of heat added during isothermal expansion. Also find the amount of heat which must be extracted from the gas to reduce it to initial state of pressure. [10]

b) An engine working on dual cycle uses a compression of 14. The intake pressure and temperature are 1 bar and 330 K. The explosion ratio is 1.4. The heat supplied during constant pressure process is twice that at the constant volume process. Determine per kg of air (i) the percentage cut-off ratio (ii) work done and (iii) air standard efficiency. [10]

6 a) An engine uses n butane (C$_4$H$_{10}$) as liquid fuel. It is supplied with 40% excess air. Both fuel and air enter at 1 atmosphere pressure and 298 K. The products of combustion leave at 600 K .Heat lost to the surroundings is 30 % of power. The engine develops 60 kW of power. Determine the mass flow rate of fuel in kg/hr. The following data is applicable : [10]

Substance	h$_f^0$ (kJ/kgmole)	h$_{298K}$ (kJ/kgmole)	h$_{600K}$ (kJ/kgmole)
C$_4$H$_{10}$ (l)	-126150	0	-
O$_2$ (g)	0	8624	18260
N$_2$ (g)	0	8660	17569
CO$_2$ (g)	-241830	8769	22285
H$_2$O (g)	-393520	9856	20402

b) In a single heater regenerative cycle the steam enters the turbine at 30 bar 400 ° C and the exhaust pressure is 0.10 bar. The feed water heater is a direct contact type which operates at 5 bar. Determine : [10]

i) The efficiency and steam rate of cycle

ii) The increase in efficiency and steam rate as compared to Rankine Cycle without regeneration.

JP-Con. 9822-15.
