# 2022

## Campus Environmental Audit-Saraswati College of Engineering Kharghar Navi Mumbai

Navy Blue Energy NavyBlue Resources Integration and Solutions Pvt Ltd

#### ABBREVIATION

A-Ampere

AC- Air conditioner

- ASHRAE American Society of Heating, Refrigeration, and Air conditioning
- BEE Bureau of Energy Efficiency
- BMS Building Management System
- CFL Compact Fluorescent Lamp
- CFM Cubic feet per minute
- DB Distribution Board balance
- DBT Dry bulb temperature
- DG Diesel Generator
- ECO Energy Conservation Opportunities
- EER- Energy Efficiency Ratio
- HT- High Tension
- IEEE- Institute of Electrical and Electronic Engineers
- IT Information Technology
- KW Kilowatt
- KVA Kilo Volt Ampere
- LED Light Emitting Diode
- LPD Lighting Power Density
- LT Low tension
- NBC- National Building Code
- ODU Outdoor units
- PAC Precision Air Conditioning
- PDU Power Distribution Board
- PF Power factor
- PSI- Pound per square inch
- TR Tonne of refrigeration
- UoM Unit of Measurement
- UPS Uninterrupted power supply
- V Voltage
- VFD Variable frequency drive
- VRV Variable Refrigerant volume
- WBT Wet Bulb Temperature

## TABLE OF CONTENTS

| Abbreviation      |   | 1        |
|-------------------|---|----------|

## ACKNOWLEDGEMENT

Energy Audit team of M/s. Navy Blue Resources Integration & Solutions Pvt Ltd (NBRI) conducted Campus Environmental Audit of Saraswati College of Engineering–30<sup>th</sup> March 2022- 31<sup>st</sup> March 2022

We would like to thank Hon. Principal and Management for providing us an opportunity to carry out Campus Environmental Audit at your Facility and would also like to thank all other staff of facility for providing all the support during audit and report preparations.

The purpose of this assessment is to conduct a complete energy performance assessment Mechanical & Electrical Equipment, Water Audit, Renewable Energy Feasibility, Waste Management and Green Audit within the said site to identify whether the existing systems can sufficiently handle the loads required by your operations and seeking improved workplace efficiently.

## **CERTIFICATE**

We here by certify that we carried out Green Audit in the Saraswati College of Engineering, between 30<sup>th</sup> to 31<sup>st</sup> March 2022.

The Management is pro-active towards Green Initiative by Harvesting, Solar Energy project planning, Planting Trees, Better water conservation, Waste Management, Carbon Foot Print; A continual improvement in Green Initiative is appreciated. We appreciate the efforts of the campus management this regard.

Pravin J. Awatade BEE-CEM/CEA EA-28824

## INTRODUCTION

The Saraswati College of engineering is the leading engineering institution in Navi Mumbai established in 2004. We aspire to be a leading research organization with a dream and vision of creating a knowledgeable society. SCOE is provided with spacious buildings to accommodate reception, auditorium, office, classrooms, staff rooms, drawing halls, laboratories, workshop, library, computer center, conference halls, examination hall, recreation centre, sports rooms, canteen, and placement cell. These facilities count us one of the Top Engineering colleges In Navi Mumbai.

Facility gets HT power supply from MSEDCL (State gov Electricity Distribution Company). In case of emergency or power failure facility having dedicated DG backup of 250 kVA set.

## AUDIT STUDY TEAM MEMBERS

The Audit team comprised of following members from Navy Blue Energy.

|        | Table 1 Audit Team Members |                            |  |  |  |  |  |  |
|--------|----------------------------|----------------------------|--|--|--|--|--|--|
| Sr. No | Name of Members            | Designation                |  |  |  |  |  |  |
| 1      | Pravin Awatade CEA-28824   | Team Leader-Energy Auditor |  |  |  |  |  |  |
| 2      | Harun Sutar – CEA- 28328   | Energy Manager             |  |  |  |  |  |  |
| 3.     | Nehal Gupta                | Energy Engineer            |  |  |  |  |  |  |

#### Table 1 Audit Team Members

## INSTRUMENTS USED FOR MEASUREMENTS AND ANALYSIS-

- 1. Three Phase Load Manager- With CT, PT
- 2. Ultrasonic Flowmeter
- 3. Single phase Instantaneous power Meters
- 4. Lux Meter
- 5. Psychrometer

## EXECUTIVE SUMMARY

## 1. ENERGY AUDIT

Navy Blue Energy Audit team observed some energy conservation opportunity in the premises. Facility can minimize its energy consumption by executing following Energy Conservation measures.

| Energy Conservation<br>Measures (ECM)  | Estimated<br>Energy<br>Saving | Estimated<br>Monetary<br>Saving | Estimated<br>Investment | Simple<br>Payback<br>Period | Priority     |
|--|-------------------------------|---------------------------------|-------------------------|-----------------------------|--------------|
|  | kWh/Year                      | Rs/Year                         | Rs                      | Month                       |              |
| Energy Savings<br>Potential by Improving<br>the power factor                           | 9787                          | 100391                          | 50000                   | 5.98                        | High         |
| Monetary savings<br>potential by reducing<br>the contract demand                       |                               | 1036800                         |                         | Immediate                   | Very<br>High |
| Energy Conservation<br>Measure by Improving<br>Pumping Performance                     | 1982                          | 20330                           | 25000                   | 14.8                        | Medium       |
| Energy Conservation<br>Measure by Improving<br>Pumping Performance                     | 1446                          | 14827                           | 20000                   | 16.2                        | Medium       |
| Energy Conservation<br>Opportunity by<br>replacing existing<br>Ceiling fan by BLDC fan | 7762                          | 79613                           | 346500                  | 52.2                        | Low          |
| TOTAL saving<br>Opportunity  | 20976                         | 1251962                         | 441500                  | -                           | -            |
| Energy Generation<br>Opportunity by<br>Installing Solar Power<br>plant                 | 70062                         | 718654                          | 2627340                 | 43.9                        | Low          |

#### Table 2 Executive Summary

Navy Blue Energy Audit team has thoroughly assessed the complete facility Performance, Team has been observed that there will be around **23.95%** of Energy Savings Can be Achieved further by implementing the above-mentioned ECM's.

## WATER AUDIT

| Table 3 Water Conservation Measures   |                                    |                                    |  |  |  |
|---|------------------------------------|------------------------------------|--|--|--|
| Water Conservation Measures   | water Savings<br>Potential kl/Year | Monetary Savings potential Rs/Year |  |  |  |
| Water conservation opportunity by replacing conventional taps with water efficient Taps | 1098.1                             | 61480                              |  |  |  |
| Water conservation potential By<br>Making STP Plant Functional                          | 2196.1                             | 122960                             |  |  |  |
| Total   | 3294.2                             | 184440                             |  |  |  |

Navy Blue Water Audit team has thoroughly assessed the complete facility Performance, Team has been observed that there will be around **45%** of Water Savings Can be Achieved further by implementing the above-mentioned WCM's.

## WASTE DISPOSAL AUDIT

Presently institute is practicing the zero waste and waste segregation on site onlygood practice.

## **GREENERY-**

Presently the campus has greenery is around the boundary, need to add some more in available areas.

## CARBON FOOTPRINT-

Total 2630 kg of CO2 getting emitted by the campus per day.

## **OBJECTIVE OF AUDIT -**

- 1. The objective of carrying out Green Audit is securing the environment and cut down the threats posed to human health.
- 2. To make sure that rules and regulations are taken care of
- 3. To avoid the interruptions in environment that are more difficult to handle and their correction requires high cost.
- 4. To suggest the best protocols for adding to sustainable development.

## SCOPE OF WORK-

### Scope of Green Audit shall consider following steps;

#### ENERGY AUDIT:

It deals with the energy conservation and methods to reduce its consumption and the related pollution. The auditor targets at the energy consuming methods adopted and find whether these methods are using the energy in a conservative way or not.

#### WATER AUDIT:

Evaluating the facilities of raw water intake and determining the facilities for water treatment. Water

harvesting is one of the best techniques that can be adopted by simply storing the water and using it at the time of scarcity. The concerned auditor investigates the relevant method that can be adopted and implemented to balance the demand and supply of water

#### WASTE DISPOSAL AUDIT:

The waste clearance measures associated to hazardous wastes and recycling are reviewed. The auditor diagnoses the prevailing waste disposal policies and suggests the best way to combat the problems.

## ENVIRONMENTAL QUALITY AUDIT:

It analyses the air quality, noise level and the programs undertaken by the institute for plantation. The Green Belt should be maintained to reduce the pollution level by decreasing the Carbon dioxide level.

#### RENEWABLE ENERGY FEASIBILITY

Resources which can be replenished should be used such as rain, sunlight, wind, tides, etc. These resources are more advantageous as they cause least pollution. The importance of these resources is explained by the Audit team.

#### CARBON ACCOUNTING:

It undertakes the measure of bulk of carbon dioxide equivalents exhaled by the organization through which the carbon accounting is done. It is necessary to know how much the organization is contributing towards the sustainable development. The auditor considers several efforts practiced by the institute to lower the Green House Gases in the atmosphere in order to make the campus more environmentally friendly.

## GOALS OF THE COLLEGE

In the effort to Enhancing an environmentally literate campus where students can learn the idea of protection of environment and stay healthy. The college Management is proactively working on the several facets of "Green Campus" including Plantation of more trees, Water Conservation, Efficient water usage by eliminating leaking water taps, Installation of ETP, Water Harvesting Pits and interconnecting them to Recharge the Ground Water table. Effective Waste Management which includes Food Waste, Plastic, Paper, Metal Work, Renewable Energy, carbon footprints etc.

- 1. To create a green campus with focus on above concepts
- 2. To Harness Solar Power
- 3. To Conserve Water by eliminating the water leakages, wastage, Rain Water Harvesting
- 4. To Reduce Waste management through reduction of Food waste generation, Plastic/Paper/Metal waste generation and effective disposal
- 5. To Reduce the Carbon Foot print
- 6. Enhancement of college profile

## ENERGY AUDIT

## BILLING ANALYSIS-

| Month       | kWh        | kVAh      | MD<br>(kVA) | bill<br>deman<br>d kVA | PF        | Demand<br>Charges    | Energy<br>Charges | Total<br>Amount | Basic<br>Energy<br>Charge<br>s | Gross<br>Energy<br>Charge<br>s |

Table 4 Billing Analysis

Audit team have done billing analysis and plotted the following graph.

#### Graph 1 Facility Yearly Energy Consumption

- 1. It is observed that the average facility energy consumption is around 7298 Units of Active energy and 8115 of total energy per month.
- 2. The actual maximum demand (average) is 43 kVA only whereas the billed demand is 300 kVA which is higher side than the actual demand.

### POWER FACTOR IMPROVEMENT SUGGESTIONS

Observation- it is observed that the average power factor of the facility is less than the unity.

## ENERGY CONSERVATION POTENTIAL BY IMPROVING THE POWER FACTOR

| Table 5 Power Factor Improvement Energy savings Potential |           |        |  |  |  |  |
|---|-----------|--------|--|--|--|--|
| Parameter   | UoM       | Value  |  |  |  |  |
| Average Present Power Factor                              | Factor    | 0.897  |  |  |  |  |
| Difference Between Active and Apparent Energy             | kWh/Month | 816.42 |  |  |  |  |
| Expected Power factor                                     | Factor    | 0.999  |  |  |  |  |
| Expected Difference between Active and Apparent Energy    | kWh/Month | 815.6  |  |  |  |  |
| Energy Saving Potential                                   | kWh/Year  | 9787.2 |  |  |  |  |
| Monetary Savings potential                                | Rs./Year  | 100391 |  |  |  |  |

| Estimated Investment  | Rs.    | 50000 |
|-----------------------|--------|-------|
| Simple Payback Period | Months | 6.0   |

Above calculations mentioned the cost benefit analysis of the power factor system improvement.

## MONETARY SAVINGS POTENTIAL BY REDUCING THE CONTRACT DEMAND

It is observed that the facility having excess demand than the actual demand of the facility.

Energy audit team have evaluated the summarised the cost benefit analysis by reducing the excess demand and applicable charges.

| Parameter                          | UoM       | Value     |
|------------------------------------|-----------|-----------|
| Present Actual Average Demand      | kVA       | 43.3      |
| Present Billed demand              | kVA       | 300.0     |
| Proposed New Billed Demand         | kVA       | 100.00    |
| Net Reduction in the billed demand | kVA       | 200.0     |
| Demand Charges                     | Rs./kVA   | 432       |
| Net Monetary Savings potential     | Rs./month | 86400     |
| Net Monetary Savings potential     | Rs./Year  | 1036800   |
| Estimated Investment               | Rs.       | 0         |
| Simple Payback                     | Months    | Immediate |

#### Table 6 Cost savings by reducing the demand

## ENERGY BALANCE

| Table 7 Energy Balance  |                   |              |               |                   |                    |                 |
|-------------------------|-------------------|--------------|---------------|-------------------|--------------------|-----------------|
| Parameter<br>/Load      | Rated<br>Capacity | Quant<br>ity | Total<br>Load | Operation<br>Time | Usage<br>Diversity | Total<br>Energy |
|                         | Wattage/k<br>W    | Nos.         | kW            | Hrs./day          | %                  | kWh/Day         |
| Ceiling Fans            | 60                | 231          | 13.86         | 8                 | 50%                | 55.44           |
| Lighting                | 20                | 264          | 5.28          | 8                 | 50%                | 21.12           |

#### Audit team prepared the energy balance of the facility.

The major energy is consumed by fans followed by AC computers and lighting.

## **Chart 1 Energy Balance**

## ENERGY CONSERVATION MEASURES

## BY IMPROVING PUMPING SYSTEM EFFICIENCY

It observed that he presently installed pumps are not efficient and we are recommending to replace the pumps with new energy efficient pumps Here is the cost benefit analysis of the same.

## PUMP1- MAIN TANK TO OVERHEAD TANK PUMPING

#### Table 8 pump 1 performance and energy savings potential calculations

| Parameter                           | UoM       | Value |
|-------------------------------------|-----------|-------|
| Actual Flow                         | m3/hr     | 13.5  |
| Head                                | meter     | 30    |
| Hydraulic Power                     | kW        | 1.10  |
| Power Drawn by Motor                | kW        | 4.88  |
| System Efficiency                   | %         | 23%   |
| Proposed System Efficiency          | %         | 70%   |
| Proposed Power Requirement          | kW        | 1.58  |
| Operating Time                      | hrs/day   | 2     |
| Power Reducing Potential            | kW        | 3.30  |
| Total Energy Conservation potential | kWh./Year | 1982  |
| Monetary Savings potential          | Rs./Year  | 20330 |
| New pump replacement cost           | Rs.       | 25000 |
| Simple Payback Period               | months    | 14.76 |

## PUMP 2- CIDCO WATER TANK

| Table 5 pump 2 energy performance and energy savings calculations |           |       |  |
|---|-----------|-------|--|
| Parameter   | UoM       | Value |  |
| Actual Flow   | m3/hr     | 7.46  |  |
| Head  | meter     | 20    |  |
| Hydraulic Power   | kW        | 0.41  |  |
| Power Drawn by Motor  | kW        | 2.99  |  |
| System Efficiency   | %         | 14%   |  |
| Proposed System Efficiency  | %         | 70%   |  |
| Proposed Power Requirement  | kW        | 0.58  |  |
| Operating Time  | hrs/day   | 2     |  |
| Power Reducing Potential  | kW        | 2.41  |  |

| Monetary Savings potential  | Rs./Year  | 14827 |  |
| New pump replacement cost   | Rs.       | 20000 |  |
| Simple Payback Period   | months    | 16.19 |  |

## Table 9 pump 2 energy performance and energy savings calculations

## ENERGY CONSERVATION OPPORTUNITY BY REPLACING EXISTING CEILING FAN BY BLDC FAN

Presently Facility having conventional fans, it is recommended to replace these fans with new BLDC Energy Efficient fans, here is the cost benefit analysis.

## Table 10 Energy Savings Calculations by replacing fan with BLDC Fans

| Parameter                                   | UoM      | Value  |
|---|----------|--------|
| Existing Fan Capacity                       | W        | 60     |
| Proposed Fan Capacity                       | W        | 28     |
| Present Energy Consumption by Fans          | kWh/Day  | 55.44  |
| Proposed Fan Energy Consumption             | kWh/Day  | 25.872 |
| Energy Savings Potential                    | kWh/Year | 7761.6 |
| Monetary Savings potential                  | Rs./Year | 79613  |
| Estimated Investment for replacing 50% fans | Rs.      | 346500 |
| Simple Payback Period                       | Months   | 52.23  |

## ENERGY GENERATION OPPORTUNITY BY INSTALLING SOLAR POWER PLANT

It is proposing to install a 69 kWp Solar Grid tied rooftop system to get green energy from solar.

Here is the cost benefit analysis of the same.

| Parameter                                    | UoM           | Value     |  |
|--|---------------|-----------|--|
| Annual Consumption (A B and C Zone)          | kWh           | 82200     |  |
| Estimated Replaceable units by Solar project | kWh           | 82200     |  |
| Estimated Min. Solar Plant Annual Generation | kWh/kWp/Annum | 1200      |  |
| Estimated Solar Capacity                     | kWp           | 69        |  |
| Energy Rate                                  | Rs/kWh        | 10.26     |  |
| Estimated Monetary Saving                    | Rs/Year       | 843154    |  |
| Estimated Investment                         | Rs            | 30,82,500 |  |
| Simple Payback Period                        | Month         | 43.87     |  |

## Table 11 Solar PV Feasibility

Site photograph 1 Available Rooftop Area for Solar Installations

## LUX LEVEL

| Area                   | Avg Lux |
|------------------------|---------|
|                        |         |
| Office Ground Floor    | 49.00   |
| Pump House             | 16.00   |
| Outdoor Lighting       | 15.75   |
| 5th Floor Lecture Hall | 62.75   |
| 2nd Floor Hall         | 35.33   |
| Sample Toilet          | 32.25   |
| Sample Toilet          | 21.67   |

## WATER AUDIT

Campus Consuming around 21m3/day water.

| 610  | m3/month |
|------|----------|
| 21   | m3/day   |
| 7290 | m3/year  |

| Table 12 Water Consumption |            |             |  |
|----------------------------|------------|-------------|--|
| Month                      | Water Unit | Bill Amount |  |
| Feb-March 2021             | 598        | 26910       |  |
| April-May 2021             | 610        | 27450       |  |
| Jun-July 2021              | 610        | 27450       |  |
| Aug-sept 2021              | 610        | 27450       |  |
| Oct-Nov 2021               | 610        | 28822       |  |
| Dec-Jan 2021               | 620        | 27900       |  |

## WATER BALANCE

| Table 13 Water Balance  |                  |  |
|-------------------------|------------------|--|
| Area                    | Water kL per day |  |
| Toilets and wash basins | 14.64            |  |
| Drinking Water          | 4                |  |
| Other                   | 2.5              |  |
| Total                   | 21.14            |  |

The major water is got consumed by toilets and Wash Basins.

## PUMPING AND ENERGY TARIFF

| Parameter          | UoM     | Value |
|--------------------|---------|-------|
| Water tariff       | Rs./kL  | 45    |
| Electricity Tariff | Rs./kWh | 10.26 |
| Pumping Energy     | kWh/Kl  | 1.071 |
| Pumping Cost       | Rs/KL   | 10.99 |

This cost shall be considered for all the cost benefit analysis in water audit report.

## WATER CONSERVATION OPPORTUNITIES

## WATER SAVING OPPORTUNITY BY CONVENTIONAL TAP REPLACEMENT WITH NEW EFFICIENT TAPS

Convectional water taps consume more water than the new water efficient taps, it is recommending to replace conventional taps with new taps. Here are the savings calculations.

| Table 14 Water conservation opportunities by replacing taps |          |        |
|---|----------|--------|
| Parameter   | UoM      | Value  |
| Present Tap Water Consumption                               | kl/day   | 7.32   |
| proposed water consumption                                  | kl/day   | 3.66   |
| Yearly Water Savings Potential                              | kl/Year  | 1098.1 |
| Monetary Savings Potential                                  | Rs./Year | 61480  |
|   |          |        |

### Table 14 Water conservation opportunities by replacing taps

Site photograph 3 Water efficient taps

## WATER CONSERVATION POTENTIAL BY MAKING STP PLANT FUNCTIONAL

Presently Installed STP is not in operation, by making it operation we can save considerable amount of fresh water.

#### Table 15 Water conservation opportunity by making STP Plant Operational

| Parameter                        | UoM      | Value  |
|----------------------------------|----------|--------|
| Present Toilet Water consumption | kl/day   | 7.32   |
|                                  |          |        |
| proposed water consumption       | kl/day   | 0.00   |
| Yearly Water Savings Potential   | kl/Year  | 2196.1 |
| Monetary Savings Potential       | Rs./Year | 122960 |
| Site photograph 4 STP Plant      |          |        |

## GREENERY SURVEY

Campus having verities of plants majorly near the boundary and container gardening.

| Container gardening near main building area   |
|---|
| Mango Trees                                   |
| Coconut tree in the campus- end boundary area |
| Greenery Around Campus                        |

## WASTE DISPOSAL AUDIT

#### Waste Management:

- 1. **Bio Waste** Mostly Food Waste is generated from the cooked food at the campus in the canteen. It is proposed to install Bio Gas plant in the campus to generate Bio Gas from the food waste, which can be used in the Food Cooking. The Procurement is in process and is installed shortly.
- 2. Non-Bio Waste Plastic Bottles / Waste Paper / Cardboards/ Batteries etc

Non- biodegradable waste, which cannot be decomposed by biological processes, is called non- biodegradable waste. These are of two types - Recyclable: waste having economic values but destined for disposal can be recovered and reused along with their energy value. e g. Plastic, paper, old cloth etc. Non-recyclable: waste which do not have economic value of recovery. e.g. Carbon paper, thermo coal, tetra packs etc. Disposal of non-biodegradable waste is a major concern, not just plastic, a variety of waste being accumulated. There are a few ways to help non-biodegradable waste management. The impact of non-biodegradable waste on the environment and also focus on its safe disposal for sustainable environment. Present Status: Dust bins were provided for the waste disposal the same is collected daily once and handed over the Municipal corporation.

## 3. E Waste Management

Waste Electrical and Electronic Equipment (WEEE) or E-waste is one of the fastest growing waste streams in the world. In developed countries, it equals 1% of total solid waste on an average. In developing countries, it ranges from 0.01% to 1% of the total municipal solid waste generation. In countries like China and India, though annual generation per capita is less than 1 kg, it is growing at an exponential pace.

Campus admitted a good practice of waste disposal from segregation stage, campus having dedicated bin to collect the dry, wet and electronics waste.

 Table 17 Waste Disposal Practice in the Campus

Waste Management System at Campus

## CARBON ACCOUNTING / FOOT PRINT

| Emission Source                  | Quantity | CO2 Emission Factor | total Emission per Day (kg) |
|----------------------------------|----------|---------------------|-----------------------------|
| <b>Teaching and Non-teaching</b> | 200      | 700 gram/person/day | 140                         |
| Two Wheelers                     | 100      | 5 gram/km           | 25                          |
| Students                         | 2500     | 700 gram/person/day | 1750                        |
| Four-Wheeler                     | 30       | 130 gram/km         | 195                         |
| Buses and other                  | 8        | 1.3 kg/km           | 520                         |
| Total kg/Day                     |          |                     | 2630                        |

Note: Assume each member travel a distance of 25 kms to college and 25 kms return to home.

| Mode of Transit | CO₂ released (per km<br>driven per person)          | CO <sub>2</sub> released during<br>production of vehicle |
|-----------------|---|--|
| Car             | 271 g   | 313 g  |
| Bus             | 101 g   |  |
| Bicycle         | 16 g (This is from the fuel<br>of the rider – food) | 16 g   |

|  | Pounds CO2         | Kilograms CO2  | Pound   | Kilogram |  |  |
|--|--------------------|----------------|---------|----------|--|--|
